

PROKERLAM LINE

ANODISED POLISHED SILVER, CHROME,
GOLD ALUMINIUM

profiles for low thicknesses

EXAMPLES OF LAYING (for laying instructions, see Prokerlam square)

PROKERLAM line is a new product conceived and designed with an almost invisible thin profile in order to reduce separation of the material to a minimum, for laying thin ceramic tiles: Kerlite/Laminam, and for mosaic. The notching created at the ends of the profiles allows the glue / adhesive to anchor perfectly to the profile. It protects the corner creating a technical-chromatic effect that is of great aesthetic value. Available in these colours AA – ANODISED SILVER aluminium , BC – Chromed polished aluminium, e BO – Gold polished aluminium.
